

YINGYI GUO

EDUCATION

Boston University, Boston, MA
Master of Applied Business Analytics
GPA: 3.58
Expected: December 2026

Auburn University, Auburn, AL
Bachelor of Landscape Architecture
May 2025

PROFESSIONAL SUMMARY

Spatial Data Analyst with a background in landscape architecture and quantitative analytics. Proficient in GIS, Python, and SQL to conduct location-based analysis and statistical modeling, translating geographic patterns, site constraints, and market dynamics into actionable insights. Experienced in integrating spatial and tabular data to support planning, investment, and development decisions in urban and real estate contexts.

SKILLS

- Spatial & Geospatial Analysis: GIS (ArcGIS/QGIS)
 - Data Visualization & Reporting: Power BI (Interactive Dashboards), Excel (Advanced Formulas)
- Programming & Data Analysis: Python (pandas, NumPy, scikit-learn), SQL (Complex Joins, Window Functions), Regression, Clustering (K-means)
 - Domain Applications: Urban & Real Estate Analytics, Financial Modeling (NPV), Landscape Planning Principles

EXPERIENCE

- ZWP INTERNATIONAL | LOS ANGELES, CA** 06/2023 to 08/2023
Internship
 - Conducted preliminary site analysis in ArcGIS Pro by overlaying spatial datasets (land use, slope, vegetation, road networks) to identify constraints and generate base maps for early design studies.
 - Processed and structured field-collected data (GPS tracks, annotated photos) into standardized formats using Python and Excel, improving data consistency for the design team.
 - Compiled weekly spatial findings into clear, visual site assessment summaries to support three rounds of iterative design review and internal discussions.
- HIAD | HARBIN, HEILONGJIANG** 05/2024 to 07/2024
Internship
 - Extracted key parameters from architectural drawings and technical documents, organizing them into structured comparison tables to support early-stage design option evaluation.
 - Analyzed cost-performance trade-offs across materials and construction methods, providing recommendations under budget and technical constraints.

AFFILIATIONS

Sigma Lambda Alpha Honor Society, Alpha Epsilon Chapter (Auburn University)

PROJECTS

Market Analytics & Investment Strategy: NYC Real Estate 12/2025

- Performed a spatial market assessment across five NYC neighborhoods, establishing a comparative baseline of key metrics including price, housing characteristics, and sales volume.
- Segmented markets via K-means clustering, identifying distinct profiles where pricing and demand patterns strongly correlated with neighborhood geography.
- Quantified locational influence on price through regression analysis, statistically isolating the premium of geography alongside property size as primary drivers.
- Delivered an actionable investment framework, classifying neighborhoods (premium, undervalued, high-turnover) with tailored, location-specific strategic recommendations.
